## **NWF Regional Airport Launches Web Site for Mobile Devices** ***NWF Regional Airport Has an App!***

Northwest Florida Regional Airport (VPS) is proud to launch its new mobile web site for your Droid, iPhone, iPad or other mobile device. "Mobile device users will notice a more streamlined, abbreviated version of our robust, main site to help find important information faster on the go," said Airport's Business Development Manager Mike Stenson. "It's another way we want to exceed our customers' expectations and make flying from your hometown airport even easier!"

The site was designed using the concept of "thumb navigation" which allows for one-hand easy access to any mobile user browsing the website. Checking on the status of a flight, or looking for airline or local taxi information, is as simple as logging onto FlyVPS.com from your mobile device. As a bonus, you'll find quick links to the VPS Facebook and Twitter pages to keep you in the loop on the latest news when you are on the go. DM us on Twitter (@FlyVPS) and let us know what you think.

The Northwest Florida Regional Airport websites were designed locally and are maintained by the Extreme Marketing Group in Destin, Florida.
